ExecuteSpec Local-Hands Persona QA

Backend + CLI/TUI evidence run - 2026-06-29

Backend under test	Patched local backend on http://localhost:8080; branch codex/backend-local-hands-hardening-20260629
CLI under test	Worktree CLI executespec 0.5.0; branch codex/tui-local-hands-hardening-20260629
Persona	Developer asks for a hotel-booking cancellation-fee change in a local git workspace
Run id	e47e60b8-8955-42aa-9437-0dd8d9bb8a53
Backend contract	localExecution=true accepted; terminal reason LOCAL_EXECUTION
Tool evidence	listFiles, readFile, writeFile, and shell tool calls recorded and posted
Verification	npm test passed 6/6
Revert	Created files removed; post-run log overwrite refused because it changed after run

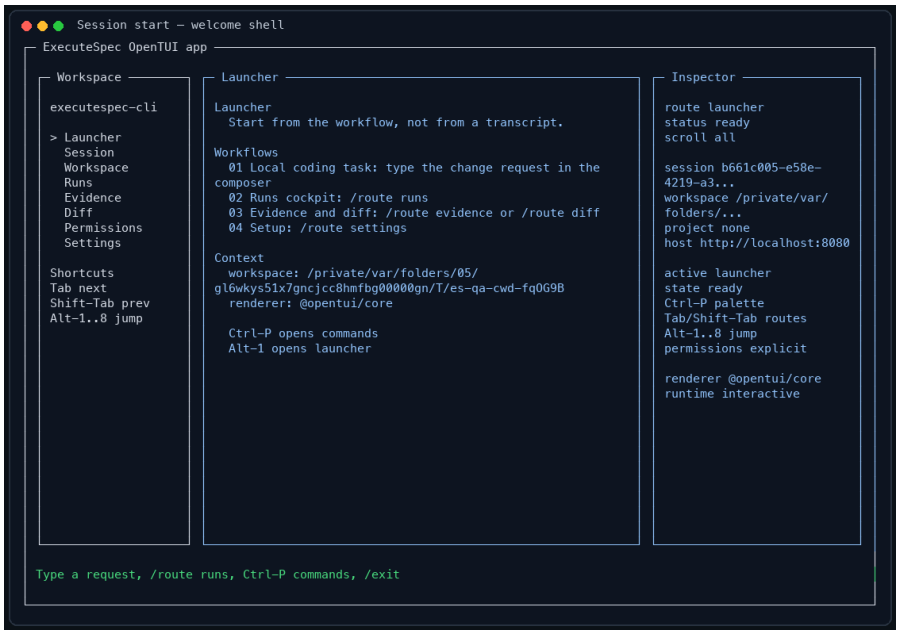

Scope Note

This report is not a mockup review. The screenshots and logs come from the real built CLI, a real local Spring backend, a real authenticated PAT session, and a real local-hands run in a disposable git workspace. It is local-environment evidence, not a deployed dev/prod smoke.

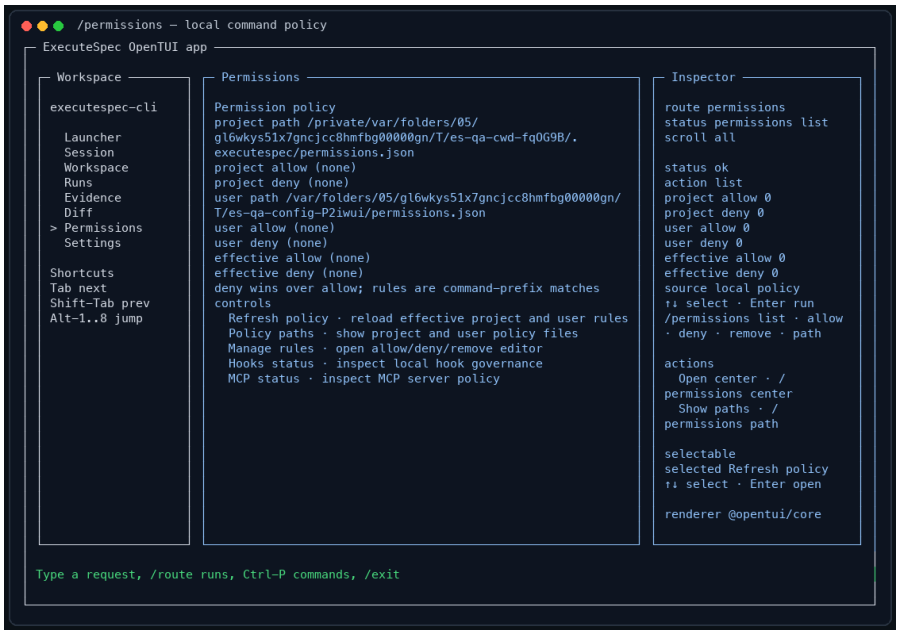

Residual risks: backend capability discovery is still reported as not wired by doctor; legacy raw TOOL_CALL payload compatibility remains documented in the backend audit; repo-level dependency vulnerabilities from OSV are documented separately.
