ExecuteSpec Web Agent Remote Sandbox - Local Remediation Aggressive Retest

Date: 2026-06-29. Surface: local backend http://127.0.0.1:8080 plus local Vite http://127.0.0.1:5173. No deploy was run per Forge instruction.

Evidence type: real local backend/frontend, authenticated throwaway local user, one synthetic local AWAITING_APPROVAL pipeline_run row inserted to exercise the real /api/agent/gates read path. No LLM prompt, credit-consuming run, approval execution, PR push, or deployment was triggered.

Executive Verdict

- Most PDF findings are now locally fixed and screenshot-backed: remote sandbox contract is visible before spend, transcript no longer dominates the entry state, approval work is a real queue with approve/reject/full-plan actions, Managed AI copy replaces ES AI credit jargon, trust boundary includes token/secrets/audit/approval/retention/network policy, mobile is approval-first, and command palette exposes sandbox actions.

- The remaining gap is deployed proof. The previous PDF was a deployed-dev audit. This retest is local-only because deployment is explicitly waiting for Forge signal. Full completion requires deploying this branch and repeating the same screenshot pass on dev.

Requirement-by-Requirement Status

PDF finding	Local remediation evidence	Status
P0 transcript dominance	Launcher and gate/composer content render before old transcript. Historical answer is behind Recent answer in tests; desktop S1/S4 show operator center.	Fixed locally
P0 real approval queue	Drawer S3/S7 shows title, project/route/age, risk, task count, credits, USD estimate, cap, Approve & run, Reject, Full plan. Inline gate also has approve/reject/full plan.	Fixed locally
P0 pre-run sandbox contract	S1/S4/S6 show Workspace, Branch, Tests, PR, Cost, Local files before run; composer repeats Remote sandbox only, Plan and cost first, Branch/tests/PR/cap, No local files touched.	Fixed locally
P1 ES AI credit jargon	S2 shows Managed AI balance and configured credit state. Unit test covers zero policy as Managed credits not configured; no ES AI credits copy in main view.	Fixed locally
P1 trust boundary at gate	S1/S3/S6 show repo token, secrets, audit trail, approval, retention cleanup policy, outbound network policy.	Fixed locally
P1 mobile approval-first	S6 shows pending approval card before empty-state/history; S7 drawer prioritizes approval inbox over conversations.	Fixed locally
P2 command palette/top bar	S5 shows Agent: New remote sandbox, Agent: Waiting approvals, Agent: Open latest sandbox. Top bar shows 1 awaiting approval plus Sandbox CTA.	Fixed locally
Backend route bug from remediation retest	Focused tests pin approval-boundary wording so requests like do not code until I approve still route to CODE_RUN_REQUIRED/create_cloud_run, not approve lifecycle.	Fixed locally
JAR-size reduction follow-up	Fat JAR reduced to 232,427,586 bytes; excluded xDS/Conscrypt/zstd/Groovy/json-path/Tika unsupported parser modules; DocumentExtractorTest protects text/Markdown/DOCX extraction.	Fixed locally
Deployed verification	Not run. User explicitly said do not deploy every time and wait for signal at the end.	Pending deploy signal

Aggressive Persona Retest

Founder / buyer - Can see the remote sandbox promise, no-local-files boundary, plan/cost gate, and branch/tests/PR/cap contract before sending. Conversion risk reduced; deployed proof still pending.

Senior backend engineer - Can inspect test/branch/PR/cost contract and trust boundary before action. The UI still cannot show exact branch or test command until a generated plan exists, which is honest and acceptable.

Engineering manager / approver - Approval queue now contains risk, task count, credits, estimate, cap, age, and direct decision actions. Owner is still absent because the backend DTO does not expose requester/owner; UI does not invent it.

CLI / VS Code local-hands user - Web remains remote-only. Local files/shell authority are not offered in Web; composer and trust panels repeat no local files touched.

Security reviewer - Boundary copy covers repo token, secrets, audit trail, approval, retention, and network policy. This is UI proof only; actual sandbox runtime policy requires deployed run evidence.

Mobile approver - Approval card and drawer are first-class at 390x844. Still dense, but no longer history-first.

Local Test Evidence

- npm --prefix frontend run format:check - passed

- npm --prefix frontend run lint - passed

- npm --prefix frontend run build - passed

- npm --prefix frontend test -- src/ide/IdeAgent.test.tsx src/ide/agentState.test.ts src/ide/agentSession.test.ts src/ide/agentChatStream.test.ts - 23 tests passed

- JAVA_HOME=/opt/homebrew/opt/openjdk@21 mvn -q -Dtest='DocumentExtractorTest,AgentAttachmentServiceTest,SpecChatServiceTest,AgentRunLifecycleIntentsTest,AgentIntentServiceTest,AgentStreamTurnStarterTest,AgentSessionServiceActionLifecycleTest,AgentSessionReadServiceTest' test - passed

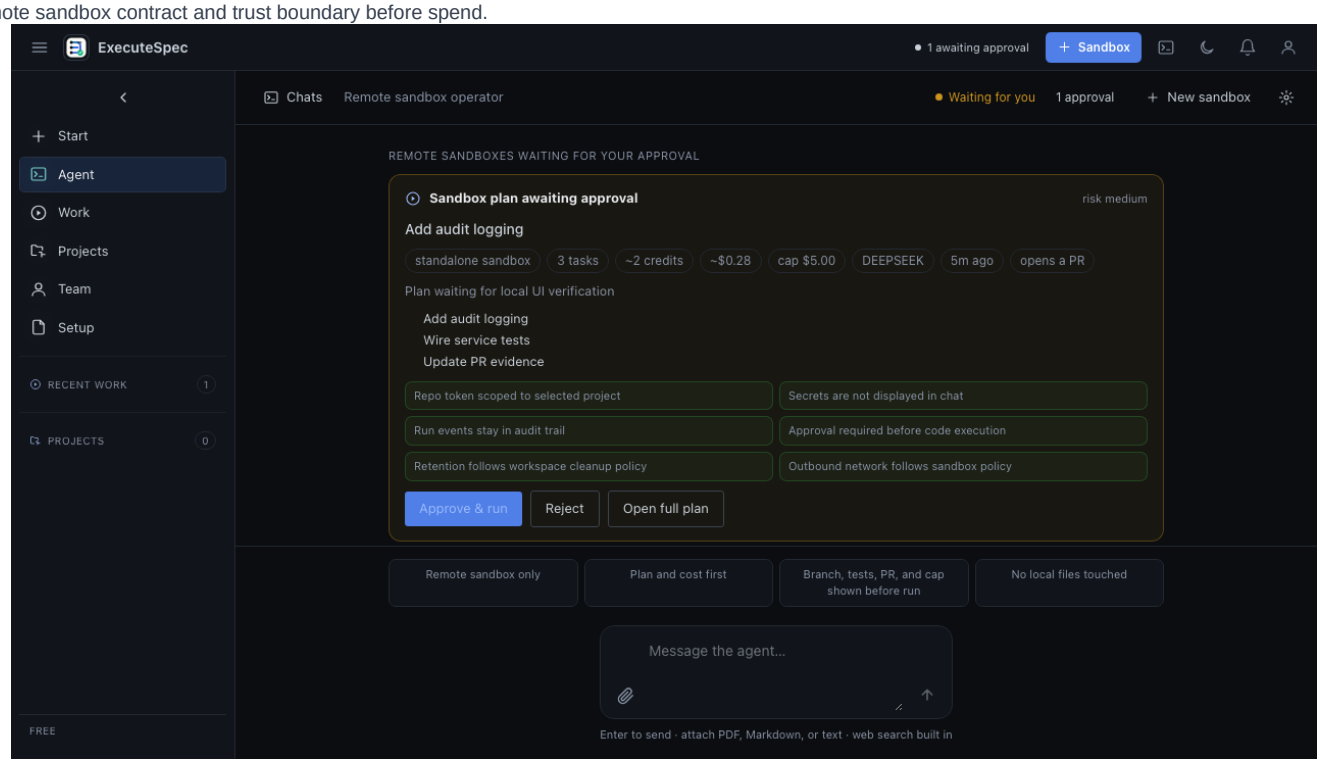

- git diff --check - passed

- Local backend boot - passed; Flyway validated 252 migrations. GCS archiving disabled locally due stale ADC, not relevant to Web Agent UI verification.

Screenshot Evidence

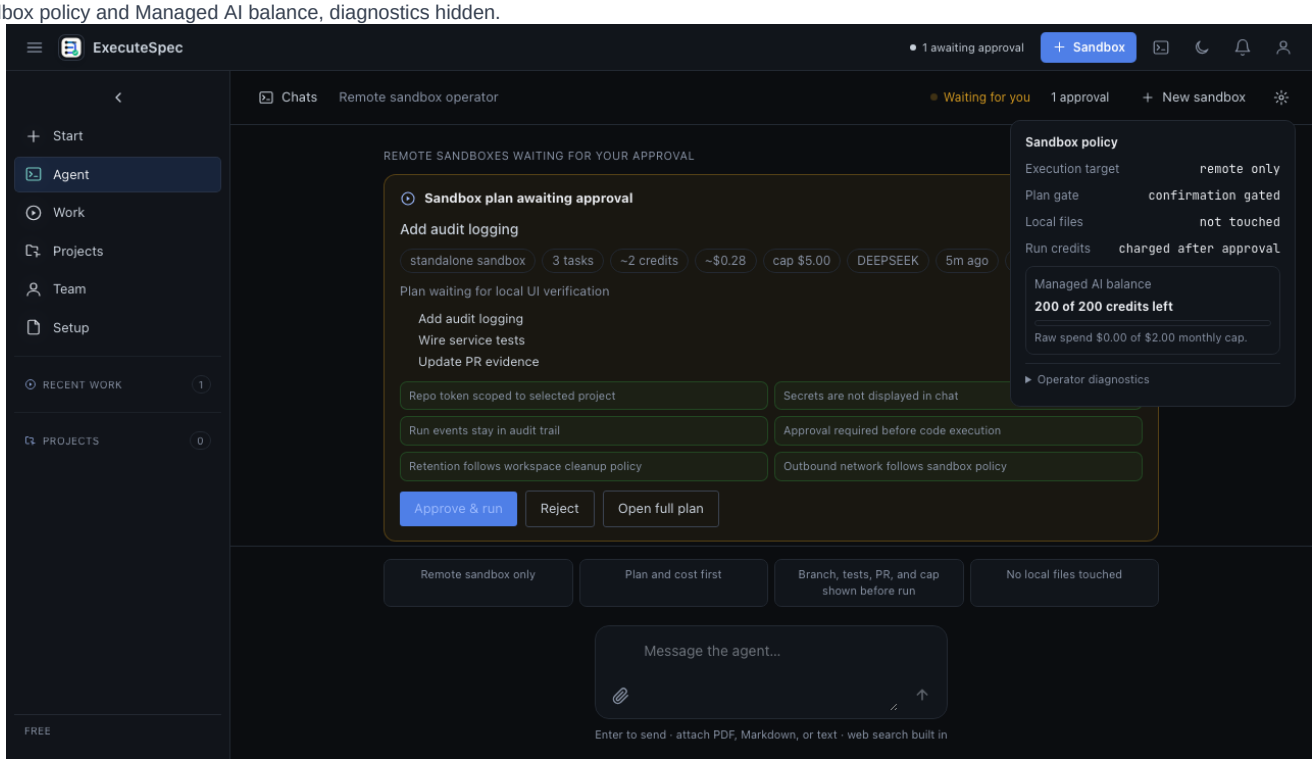

S1 - Desktop entry

Remote sandbox contract and trust boundary before spend.

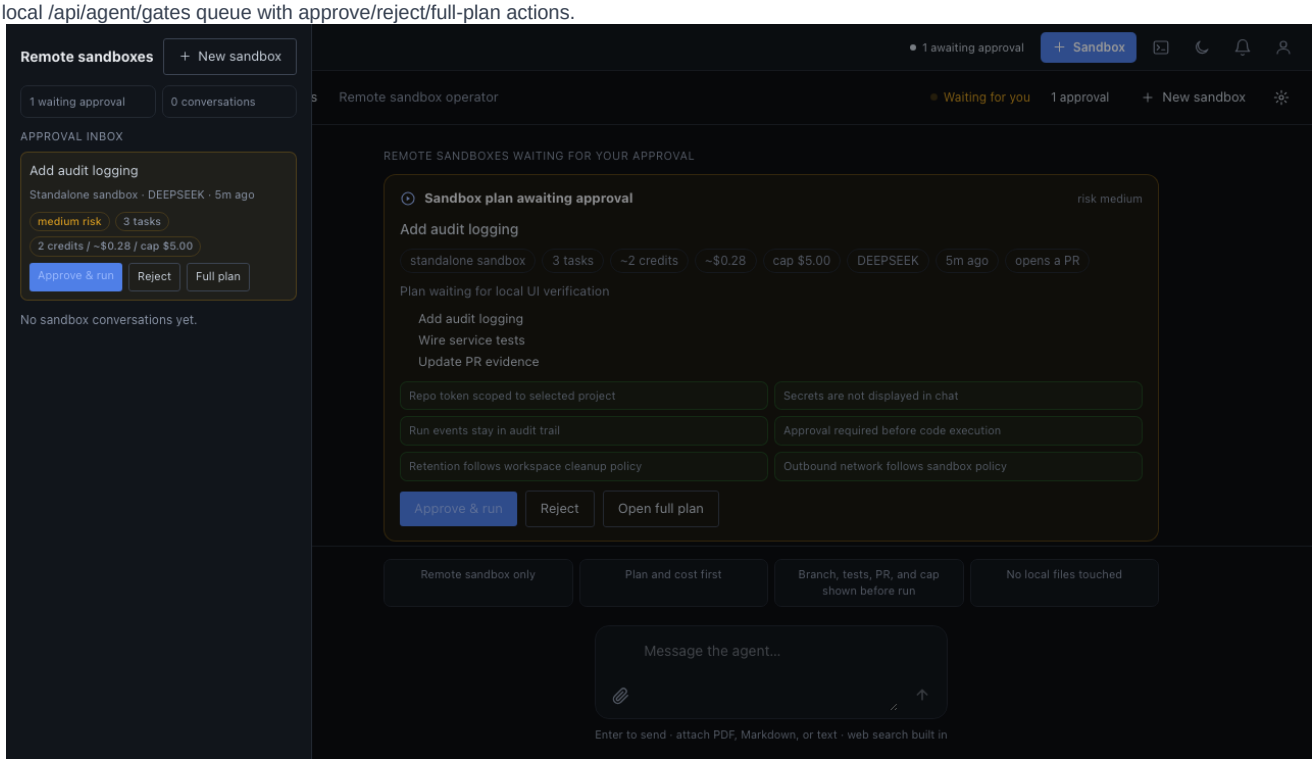

S2 - Settings policy

Sandbox policy and Managed AI balance, diagnostics hidden.

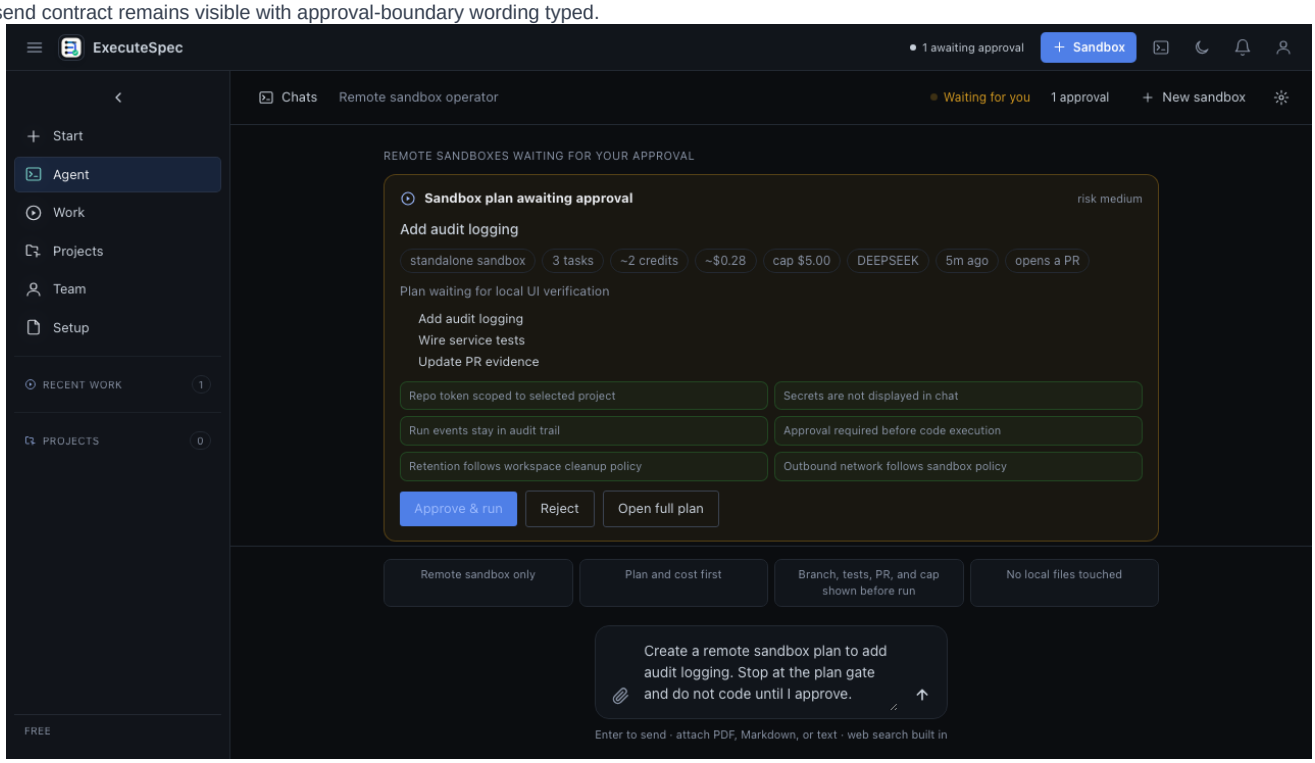

S3 - Approval inbox

Real local /api/agent/gates queue with approve/reject/full-plan actions.

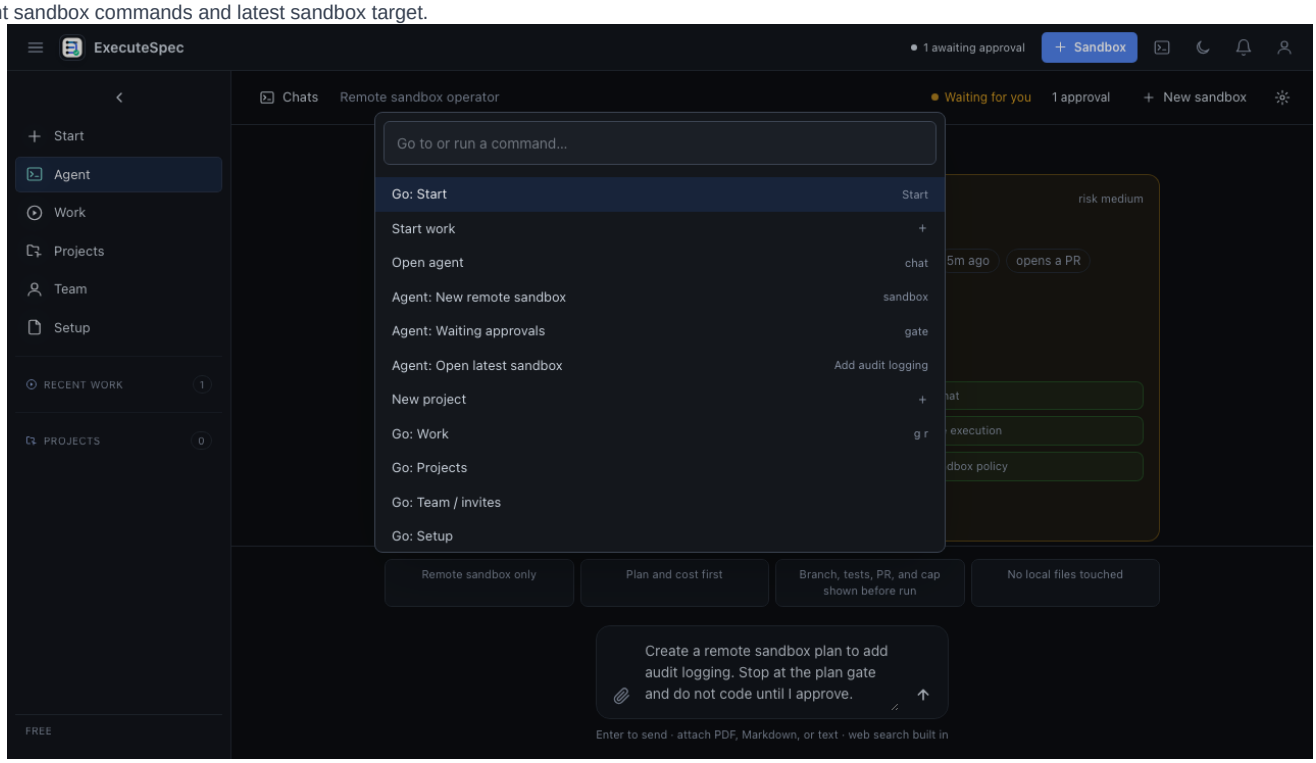

S4 - Composer contract

Pre-send contract remains visible with approval-boundary wording typed.

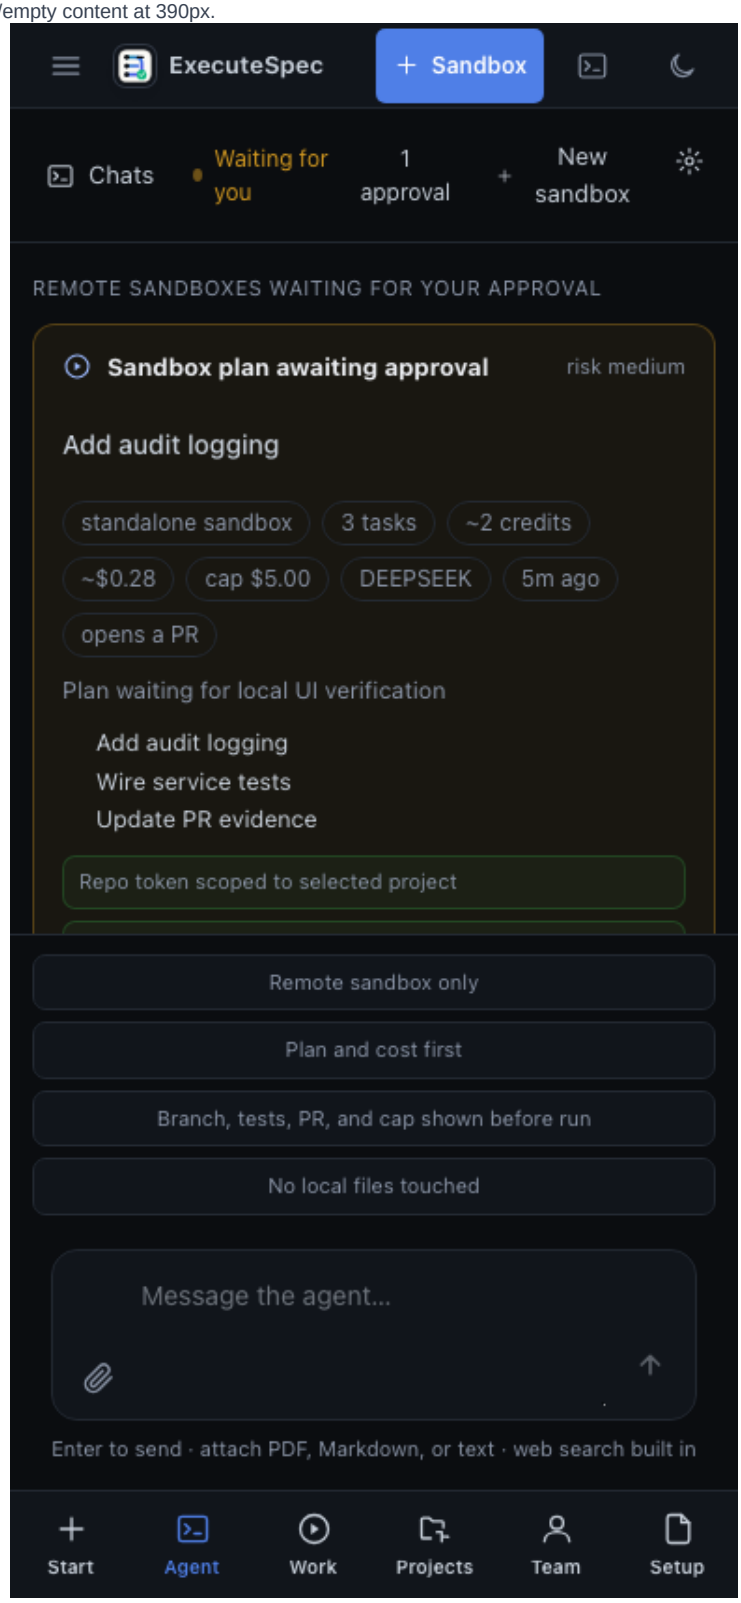

S5 - Command palette

Agent sandbox commands and latest sandbox target.

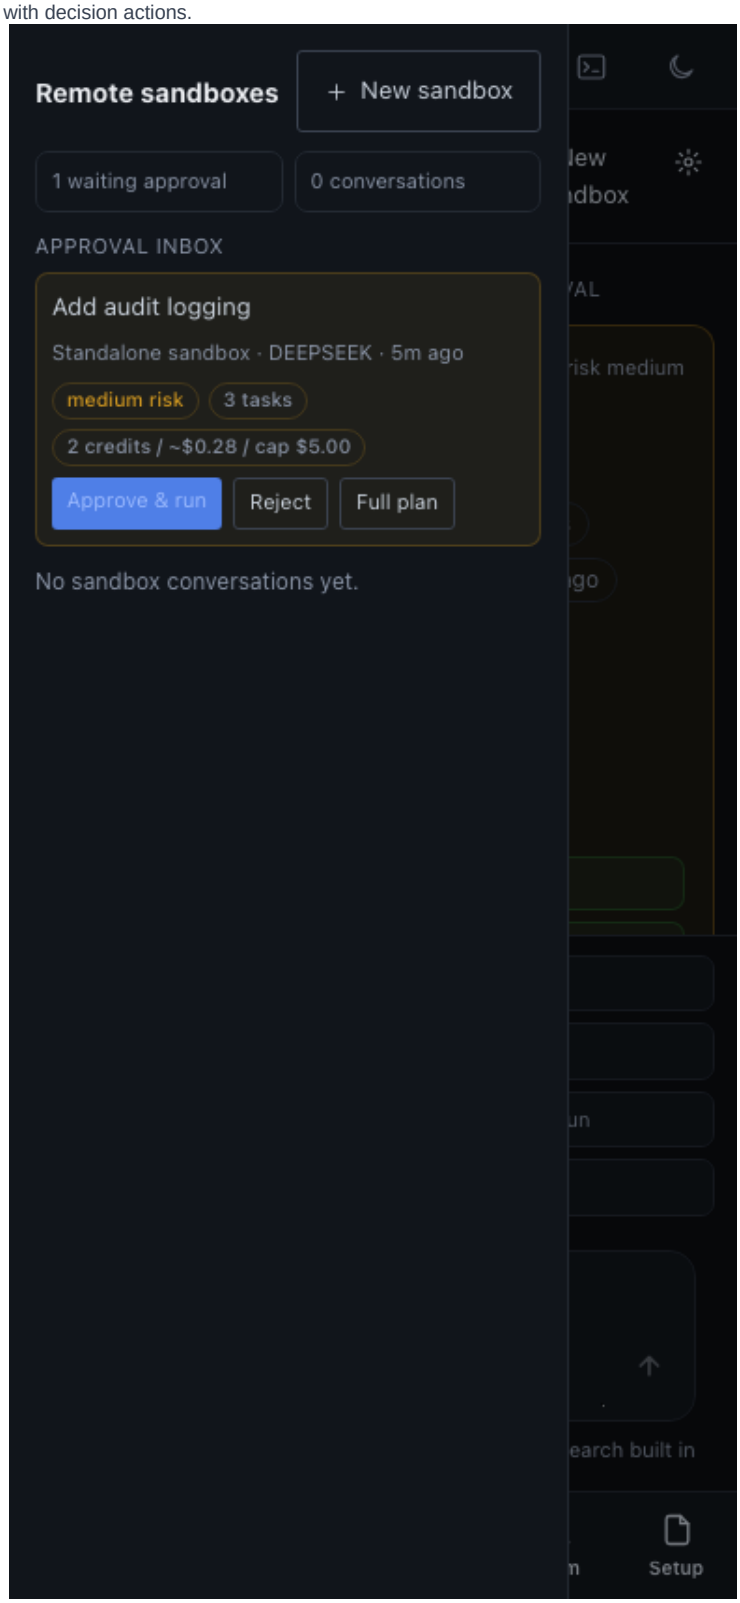

S6 - Mobile approval-first

Pending approval card before history/empty content at 390px.

S7 - Mobile approval drawer

Approval inbox first on mobile drawer with decision actions.

Remaining Work Before Goal Can Be Marked Complete

- Deploy this branch only after Forge explicitly signals deployment.
- Repeat the same persona screenshot pass against https://dev.executespec.ai/agent.
- Verify a real plan-gate create/approval/run path on dev if credits/provider policy allow it, or explicitly mark it out of scope.
- Regenerate a final deployed evidence PDF and compare against this local retest.
